

# HIGH PRESSURE FILTERS UP TO 30,000 PSI

**HHP**

## FEATURES

- In-line mounting
- Temperature range -20°C to 60°C
- Cone and thread connection, available in 1/4" and 3/8" size
- Robust stainless steel 15-5 PH body material
- Replaceable filter elements of 5, 20 and 40 µm
- Easy to replace and maintain

## GENERAL

UCT's high-pressure filter type, designed to deliver maximum filter capacity in high-pressure applications. With its expansive filter surface area, the need for frequent filter element replacements is minimized. The filter type comes equipped with high-pressure connections and can be in-line-mounted to optimize mounting space. Replacing the filter element is simple and can be done with basic tools.

We offer standardized high-pressure filter assemblies featuring 5µm absolute, 20µm nominal, and 40µm nominal filter elements, catering to a wide range of common applications. Custom filter size elements are also available upon request
