

HAM-LET PLUG VALVES

PLV SERIES

- ✔ Plug valve with working pressures up to 3000 psig (206 bar)
- ✔ One-piece body design and variety of O-rings for chemical compatibility
- ✔ Replaceable plug assembly

PLV FEATURES

- Tight shut-off with throttling capability
- One piece body design
- Replaceable plug assembly
- Stainless steel and brass construction
- MAWP 3000 psi (206 bar)
- MAWT 400°F (204°C)
- Variable end connection types & sizes from 1/8" to 1/2" (6mm to 12mm)
- Colored nylon handles
- Low-operating torque
- Easy to maintain & clean
- Choice of o-rings for chemical compatibility
- Passivated body

GENERAL

The PLV series offers a manually operated plug valve that features tight shut-off with high-pressure throttling capability, long life cycle service and low-operating torque.

The plug valve is rated to 3000 psig making it an optimal choice for a variety of instrumentation systems such as sampling, analytical purging and cleaning applications.

PRESSURE TEMPERATURE RATING

Based on PTFE Coated Fluorocarbon FKM O-rings.

O-RINGS

Different materials available for special applications.

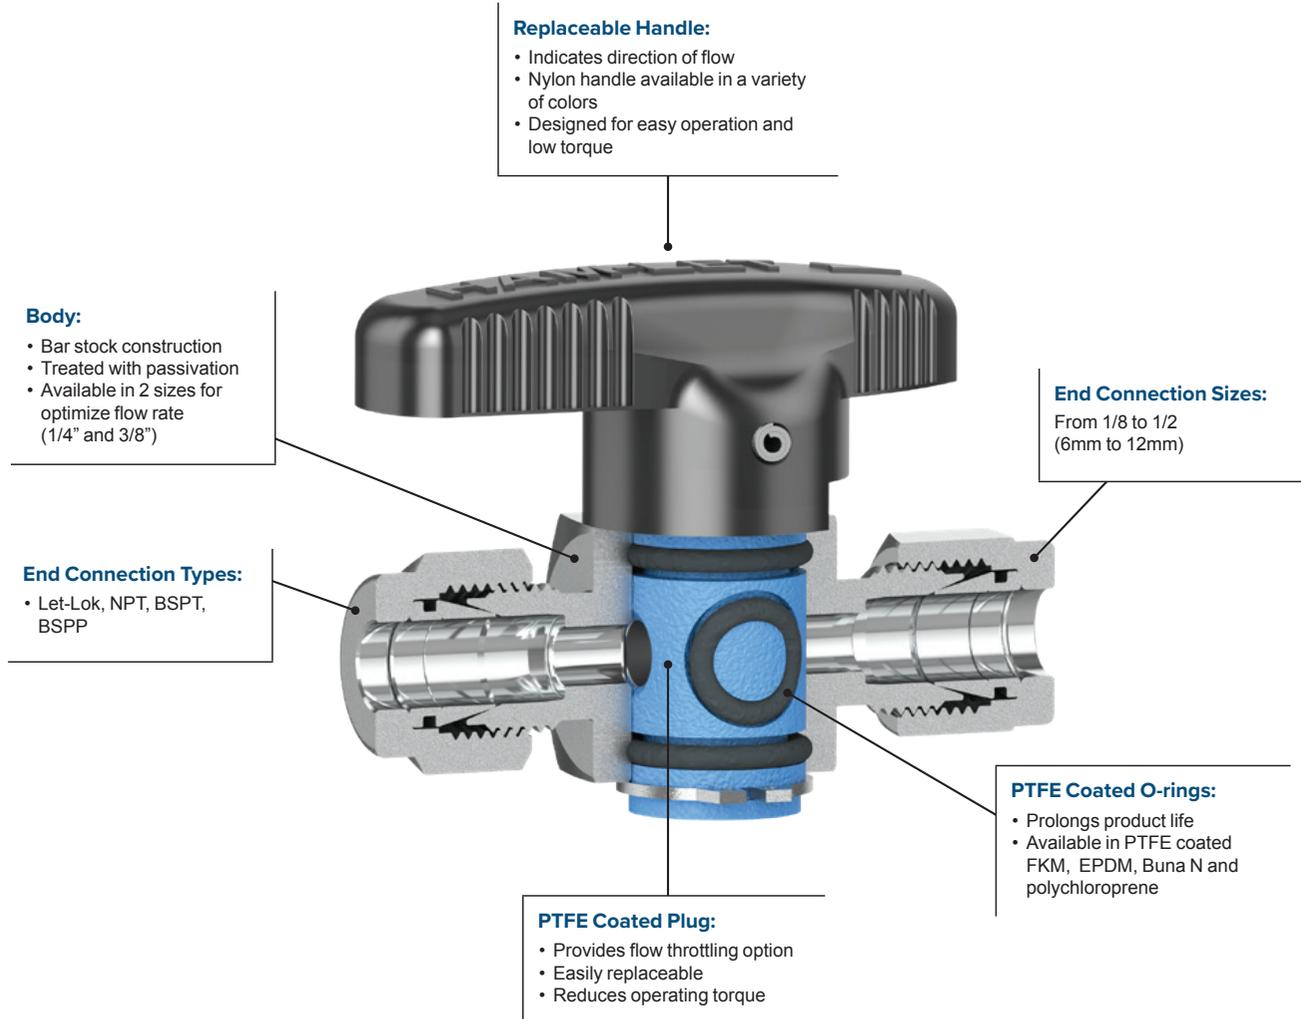

| O-ring Material | Temperature Rating °F (°C) |
|----------------------------------|----------------------------|
| PTFE coated buna N | -10 to 250 (-23 to 121) |
| PTFE coated EPDM | -50 to 300 (-45 to 148) |
| PTFE coated fluorocarbon FKM | -10 to 400 (-23 to 204) |
| PTFE coated polychloroprene (CR) | -40 to 250 (-40 to 121) |

TESTING

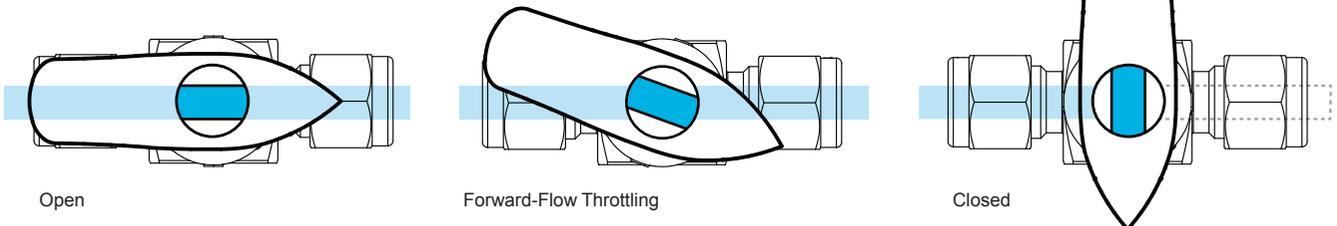

The plug valve design is burst and proof tested. Standard testing for each plug valve includes testing with nitrogen at 80 & 1000 psig. Each valve is tested for leakage through the shell and plug O-Rings. The maximum allowable leakage across the ball seats is 0.1 std cc/min.

CLEANING & PACKAGING

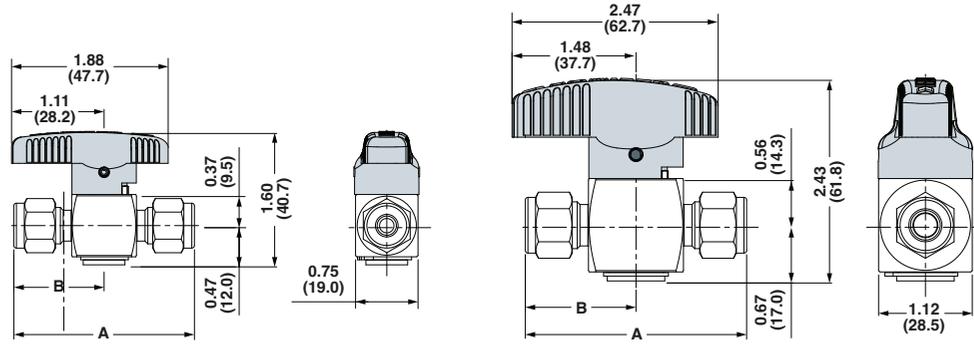

Every Plug valve is cleaned in accordance with standard cleaning and packaging (procedure 8184). Oxygen Clean & Lubricant-Free cleaning and packaging, in accordance with special cleaning and packaging (procedure 8185), is an option. Lubricant-free cleaned valves have significantly higher actuation torque.

OPERATION

- Valve is capable of bi-directional flow (please note maximum differential pressure is limited to 150 psig when flow is reversed).
- Reverse-flow throttling may damage O-ring.

DOWNSTREAM VENT

- In the closed position the plug valve allows the release of pressure to the atmosphere.
- The maximum working pressure for downstream vents is 150 psig.
